

WRAPPING THE BODY IN THE SHROUD

Respect Everybody shrouds are designed to have one side slightly longer than the other,

First insert the BodyBoard into the sewn in pouch inside the shroud, this is to give stability whilst carrying and lowering

Add the tapered end first for ease of placing inside the shroud

Lay the shroud on a suitably long table or stretcher with the carrying handles to the bottom so the pouch for the bodyboard to slide into is on the top

Respect Everybody Shrouds are designed to have one side slightly longer than the other.

Firstly wrap the feet

Then swathe the body with the shorter side first diagonally across the body from the feet to the opposite shoulder
Then bring the other side of the Shroud over

Fold the end over the face

and then bring over the sides

Gently fasten the ties in a bow to hold the shroud closed

Lifting the shrouded body - ALWAYS LIFT - DO NOT DRAG!

Take the weight evenly
When carrying the shrouded body

This is the way to simply carry the shrouded body
BUT NOT like this as you should keep the bodyboard level
